FRAMEWORK

— AI CONTENT BRAND SYSTEM

A framework for AI-generated content.

Colour, typography, imagery, and voice guidance — built to be pasted directly into any AI model (Claude, GPT, Midjourney, etc.) so every generated asset looks and sounds like it belongs to Framework.

— 01 — OVERVIEW

How to use this document

This is Framework's brand system, written specifically to guide AI models when they generate content on the company's behalf — copy, images, social posts, decks, or code comments. Paste this entire document into any AI tool (Claude, ChatGPT, Midjourney, etc.) before asking it to produce Framework-branded content, or reference specific sections when a task only needs one dimension (e.g. only the colour palette for a chart, or only the voice guidance for a caption).

Every value below — colours, fonts, spacing, and copy patterns — was extracted directly from the live styling of frameworkco.ca, not invented. Treat it as the single source of truth; if a future AI output contradicts it, this document wins.

Brand in one paragraph

Framework is a business-building firm, not a design shop. It approaches business the way an architect approaches a building: strategy first, design second, execution third. The visual identity reflects that discipline — near-monochrome, grid-based, sharp-cornered, and unornamented. Every element on the page (and in every AI-generated asset) should look load-bearing, not decorative.

Brand personality

Is	Is not
Professional, strategic, modern, minimal	Salesy, flashy, trendy
Confident, intelligent, trustworthy	Corporate, jargon-heavy
Premium, practical, architectural	Overly creative, cluttered, ornamental

— 02 — COLOUR PALETTE

Near-monochrome. Colour is structural, not decorative.

Framework's site uses no accent colour at all — only ink, paper, and three greys. Contrast and whitespace do the work that colour normally would. When generating AI content, default to this same restraint: black-on-white or white-on-black, with grey reserved for secondary text and hairline dividers. Do not introduce a brand accent colour (blue, orange, etc.) unless a specific client project calls for one.

Ink
#0A0A0A
rgb(10, 10, 10)
Primary text, headlines, primary buttons, dark section fills

Paper
#FFFFFF
rgb(255, 255, 255)
Primary background, text on dark fills

Slate
#5C5C5C
rgb(92, 92, 92)
Secondary body copy, muted descriptions

Stone
#A3A3A3
rgb(163, 163, 163)
Eyebrow labels, tertiary text, nav inactive state

Hairline
#E0E0E0
rgb(224, 224, 224)
1px dividers, card borders, subtle section fills

Mist
#F5F5F5
rgb(245, 245, 245)
Faint surface tint for callouts and code blocks

Usage rules

— 90 / 8 / 2 rule — roughly 90% of any layout should be paper or ink, 8% mid-grey (slate/stone), and 2% hairline detail. No single AI-generated asset should introduce more than the greys listed above.

— No gradients, no shadows, no glows. Flat fills only. If depth is needed, use a 1px hairline border (#E0E0E0) rather than a drop shadow.

— Dark sections invert, they don't tint. A dark section is pure ink (#0A0A0A) with paper text — never navy, charcoal-blue, or warm black.

— Photography and illustration stay desaturated. Prefer black-and-white or muted greyscale imagery; if colour photography is unavoidable, keep saturation low and let structure (lines, grids, materials) carry the image.

Switzer for structure. General Sans for everything else.

The site pairs exactly two typefaces, both from the same type family philosophy (clean, geometric, Swiss-influenced grotesques): Switzer for display and headline moments, and General Sans for body copy, navigation, buttons, and labels. AI models generating copy don't need to render fonts, but any AI generating design mockups, slides, or web code should reproduce this pairing exactly. Both are free for commercial use, from Fontshare.

Typeface roles

Role	Typeface	Weight	Notes
Display / H1	Switzer	Bold (700)	Tight tracking, ~-2%
H2 / section titles	Switzer	Semibold (600)	Tight tracking, ~-1%
H3 / card titles	Switzer	Semibold (600)	Tight tracking, ~-1%
Body copy	General Sans	Regular (400)	Normal tracking, generous leading
Buttons / nav	General Sans	Medium–Semibold (500-600)	No uppercase transform
Eyebrow / index labels	General Sans	Semibold (600)	Uppercase, wide tracking (~1.8px), grey

Scale (as measured on the live site, desktop)

Element	Size	Line height	Letter spacing
H1 (hero)	~106px / 80pt	~0.98×	-2.1px
H2 (section)	52px / 39pt	1.2×	-0.5px
H3 (card)	22px / 16.5pt	1.1×	-0.2px
Body	17px / 12.75pt	1.6×	normal
Eyebrow / label	13px / 9.75pt	1.1×	+1.8px, uppercase

Element	Size	Line height	Letter spacing
Nav link	15px / 11.25pt	1.6×	normal

Rules for AI-generated copy layout

— Headlines break across 2-4 short lines rather than wrapping naturally — write headline copy in punchy, self-contained phrases so manual line breaks read cleanly.

— Never use more than two typefaces in a single asset. If Switzer/General Sans aren't available in a tool, substitute a geometric grotesque (e.g. Space Grotesk) for display and a neutral grotesque (e.g. Inter, Work Sans) for body.

— Eyebrow labels always precede a headline: a short em-dash, then an uppercase, letter-spaced label (e.g. — WHAT WE DO).

— Never use italics for emphasis in UI copy; use weight (semibold) instead. Italics are reserved for quotes or asides only.

Architectural structure, not surface decoration.

The layout language borrows directly from architectural drawing and construction documentation: numbered indices, hairline grids, sharp square corners, and generous negative space. Any AI tool generating layouts, mockups, or UI should follow these structural rules before considering colour or imagery.

Structural motifs

01 **Numbered index labels**
Every list of services, steps, or features is numbered 01, 02, 03… in grey, set in Switzer Semibold, smaller and lighter than the item's title. Mirrors blueprint / spec-sheet numbering.

02 **Hairline dividers**
1px, #E0E0E0 rules separate every section and every row inside a grid — never a shadow or a thick rule.

03 **Zero border radius**
All buttons, cards, and containers are sharp 90º corners. Rounded corners read as "soft SaaS," which conflicts with the architectural, engineered feel.

04 **Two- and three-column grids**
Content sits in a strict column grid with consistent gutters; asymmetric column widths (e.g. wide headline / narrow supporting text) are used deliberately, never centered hero blocks.

05 **Eyebrow + headline + support pattern**
Nearly every section follows: small uppercase eyebrow label, then a large Switzer headline, then one line of General Sans supporting copy.

06 **Inverted (dark) sections as punctuation**
Roughly one section per page flips to full ink background with paper text — used sparingly, to mark a transition or call to action, never as the default.

Logo mark

A solid black square containing a bold, geometric “F” monogram in paper white, paired with the wordmark “FRAMEWORK” in uppercase General Sans with wide letter-spacing. Keep the mark strictly monochrome (ink-on-paper or paper-on-ink) — never recolour, add gradients, or add drop shadows to it.

Buttons & interactive elements

Style	Fill	Text	Border	Corners
Primary	Ink #0A0A0A	Paper, Semibold	None	Sharp (0px)
Secondary	Transparent	Ink, Semibold	1px Ink	Sharp (0px)
Nav link (active)	Transparent	Ink, Medium	1px underline	—
Nav link (inactive)	Transparent	Slate, Medium	None	—

Construction-industry precision, shot like architecture.

Because Framework's core clients are contractors, tradespeople, and construction-adjacent small businesses, imagery should nod to that world — structure, materials, tools, blueprints, job sites — but always through a clean, editorial, architectural lens. Never use generic “corporate stock photo” imagery (handshakes, people pointing at laptops, forced smiles).

Do

— High-contrast black-and-white or desaturated photography of structural details: steel beams, concrete, scaffolding, blueprints, drafting tools, grid lines.

— Strong geometric composition — leading lines, symmetry, negative space, top-down or architectural elevation angles.

— Minimal, single-subject shots rather than busy scenes; let whitespace/negative space breathe around the subject.

— Line-drawing or wireframe/blueprint-style graphics (isometric structures, grid overlays, technical annotations) for abstract or diagrammatic content.

— Natural, functional lighting — hard directional light and real shadow, not soft studio glow.

Don't

— Bright, saturated colour palettes, gradients, or neon accents.

— Cartoon/illustrated icon sets, flat-design mascots, or 3D-rendered “tech blob” graphics.

— Cliché business stock photography (handshakes, boardrooms, stock “team celebrating” shots).

— Cluttered scenes with many competing focal points.

— Rounded, bubbly UI chrome in any generated app or dashboard mockup.

Ready-to-use AI image prompts

Paste directly into an image model (Midjourney, DALL·E, Nano Banana, etc.). Swap the bracketed subject for the specific asset you need.

GENERAL BRAND PHOTOGRAPHY PROMPT

Minimal architectural photograph of [SUBJECT, e.g. a steel structural beam / a set of drafting tools / a concrete stairwell], shot in high-contrast black and white, strong geometric composition with clear leading lines, generous negative space, hard directional natural light, editorial and precise, no people, no clutter, no colour saturation, resembles a page from an architecture monograph. Aspect ratio 16:9.

CONSTRUCTION / TRADES SUBJECT PROMPT

Clean, high-contrast black-and-white photograph of [SUBJECT, e.g. a contractor reviewing blueprints on site / scaffolding against a clear sky / a framed timber structure mid-build], shot from a considered architectural angle, minimal and uncluttered, natural hard light and real shadow, no smiling-at-camera poses, documentary and precise rather than staged, feels premium and structural, not a generic stock photo.

ABSTRACT / DIAGRAMMATIC GRAPHIC PROMPT

Minimal technical line-drawing of [SUBJECT, e.g. an isometric building frame / a grid-based site plan / a blueprint diagram], thin white or black lines on a solid ink (#0A0A0A) or paper (#FFFFFF) background, no colour, no gradients, no shading, precise and geometric like an architectural blueprint or engineering schematic, sharp corners, evenly spaced grid, plenty of negative space.

SOCIAL MEDIA / INSTAGRAM CAROUSEL BACKGROUND PROMPT

Flat, minimal background graphic for a social media carousel slide: solid #0A0A0A or #FFFFFF field, a single thin hairline grid or a single bold geometric shape (square or rectangle) as the only visual element, generous whitespace reserved for Switzer bold headline text and General Sans supporting text, architectural and restrained, no icons, no illustration, no drop shadows.

Write like a strategist, not a marketer.

Framework's copy is short, declarative, and confident. Sentences are simple. Claims are earned, not asserted. The brand explains why a decision matters rather than trying to sell the reader on it. This section is written so it can be pasted straight into an AI text model's system prompt.

Voice principles

— Clarity over cleverness. If a simpler word says the same thing, use it. No wordplay, no puns, no forced metaphors beyond the architecture/construction framing already built into the brand.

— Confidence, not arrogance. State positions plainly (“We build the foundation your business runs on”) rather than hedging (“We think we might be able to help”) or overselling (“We're the #1 agency for...”).

— Short sentences, short paragraphs. Most sentences on the live site are under 20 words. Paragraphs are 1-3 sentences.

— Structure before style. Lead with the plan, the sequence, or the system (“Six stages. The same sequence for every client.”) before describing the emotional benefit.

— Problem framing, not feature dumping. Describe the business problem being solved before describing the service (“Most businesses start with a logo... We start with a plan.”).

Words and phrases to use

Framework, foundation, structure, strategy first, built to grow, system (not “stack of freelancers”), clarity, trust, long-term partner, execution, sound (as in “structurally sound”), repeatable.

Words and phrases to avoid

Disrupt, game-changing, synergy, world-class, best-in-class, unlock your potential, take it to the next level, passion, hustle, any exclamation points, superlatives without evidence (“the best,” “the ultimate”), emoji, hashtags in body copy.

Sample transformation

Off-brand	On-brand
“We're passionate about helping YOU unlock your business's full potential! ”	“We build the foundation your business runs on, then stay involved as it grows.”
“Our game-changing 5-step process delivers world-class results.”	“Six stages. The same sequence for every client, so nothing gets built before it's been properly planned.”

— 07 — DROP-IN AI PROMPT

Copy-paste system prompt

Paste the block below as-is into Claude, ChatGPT, or any other model before asking it to generate Framework content (copy, image briefs, social posts, decks, or code). It condenses every rule above into a single operating brief.

SYSTEM PROMPT — PASTE VERBATIM

You are creating content for FRAMEWORK, a premium business-building firm for entrepreneurs, contractors, and small businesses. Follow this brand system exactly:

COLOUR — Near-monochrome only: Ink #0A0A0A, Paper #FFFFFF, Slate #5C5C5C, Stone #A3A3A3, Hairline #E0E0E0. No accent colour, no gradients, no shadows. Roughly 90% ink/paper, 8% grey, 2% hairline detail.

TYPE — Switzer (Bold/Semibold) for headlines and section titles, tight letter-spacing (-1 to -2%). General Sans (Regular/Medium/Semibold) for body copy, buttons, and navigation, normal spacing. Uppercase, wide-tracked General Sans Semibold for small eyebrow labels only.

LAYOUT — Strict column grids, generous whitespace, 1px hairline dividers, zero border-radius (sharp square corners everywhere), numbered index labels (01, 02, 03…) for lists and steps. Eyebrow label, then bold headline, then one line of supporting copy is the default section pattern. Use one full-ink inverted section per page at most, for emphasis or calls to action.

IMAGERY — Architectural, high-contrast, black-and-white or desaturated. Construction/trade subject matter (structure, materials, blueprints, tools, job sites) shot with editorial restraint. No stock-photo clichés, no colour saturation, no illustrated icons or 3D mascots.

VOICE — Clear, confident, strategic. Short sentences and short paragraphs. Lead with the plan or system before the benefit. Avoid marketing jargon, superlatives, exclamation points, and emoji. Sound like an architect explaining a structure, not an agency selling a service.

OVERALL FEEL — Every asset should look load-bearing: intentional, structural, and built to last, never decorative or trend-driven.

Source

All colours, fonts, and layout patterns in this document were measured directly from the live computed styles of frameworkco.ca (fonts: Switzer and General Sans, both via Fontshare).
